OUTPUT OF FEBRUARY

Month Closes on an Imposing Exhibit.

CROP OF COPPER

Settlements Made In the Open Market.

Production Reaches Nearly \$2,670,-000, With Some Ore Going Out-Prepare for Bigger Tonnage.

February in the ore and bullion market closed on settlements aggregating \$1,793,500, notwithstanding the heavy storms and bad roads that at intervals made it impossible for the producers of some of the camps to reach the bins. During the same period there wor forwarded from the "copper furnaces" of the valley 2,921,642 pounds of copper bullion containing gold and silver and of the value of \$876,492, this swelling the total to \$2,669,992, without reference to bullion that is piled up in each of the storehouses. In addition to the ores reduced at home, there was probably 6000 tons permitted to go to furnaces without the State, while March, opening with the average road cleared for action, promises a most pronounced in-crease. At every plant in the valley, with one exception, indeed, enlarge-ments are in progress, while there is not one of the more active producers which is not ready to respond to an increased levy from the smelters. Mean-while the Yampa smelter, youngest of the cluster, is settling down to its work. with enlargements to be tacked onto it in a short time, while the fading hours of February were characterized by the limbering up of two new stupendous concentrators at the Utah Copper com-pany and the Honerine, respectively, without mentioning that of the Ohio company, which went into steady com-mission during the month, as did that of the Uncle Sam at Tintic.

The output of copper bullion revealed the most pronounced increase, the total from all sources amounting to 3.651,642 pounds, as compared with 2,736,580 pounds for the corresponding month last year, the record closing as follows month

The day's settlements in the open The day's settlements in the open market amounted to \$08,900, McCornick & Co. reporting them as they follow: American bullion, \$28,900; gold, silver, lead and copper ores, \$40,000.

In the metal market silver ruled at \$8½ cents an ounce, lead at \$2.50 per hundred pounds, and casting copper at

11% cents a pound.

A BAD WRECK ON THE COPPER BELT

With three carloads of ore from the Boston Con. of Bingham a locomotive on the Copper Belt railway took a header at an early hour Sunday morning and was piled up at the bottom of the gulch. Appreciating the needs of is customers and the inconvenience a sang-up would incur, the management at once opened negotiations with Su perintendent Young of the Rio Grande and last night the big Shea engine that formerly did service on the East Tintic railway was in commission.

As is well known, the management of the Copper Belt has with a single machine been operating night and day in herculean endeavor to meet the re-quirements of its patrons. Early Sunday morning it was descending the grade with three loaded cars at the rear, when the wheels began to slip over the chilled rails and ice that coated them. The brakes were put on and everything done to check the train, but it was hopeless, and while the crew jumed to save their necks the engine jumped to save their necks, the engine and cars dashed over the embankment and piled up below. Immediately news of the accident became known an order to shut down was posted at the Ohio company's mill, while the extraction of ore was suspended at the Boston Con. The interruption can last but a few hours, said Assistant Manager Bayly yesterday, and the mines are admon-lehed to keep their forces intact,

BIG MONEYS IN THE BISMUTH ORES

The result of assays on samples of ore from the bismuth discoveries out of Sodaville, Nev., yesterday disclosed

the presence of 11 per cent of that mineral, or 220 pounds per ton, this having a valuation of \$440, said W. R. Smith, by whom the rock was brought in. An analytical test of the samples is now being made by Rives Ellis, the assayer and chemist, the result of which is promised today, when the other con-tents will have been determined. Mr. Smith is quite enthusiastic over his possessions in the camp of bismuth, and will begin active development at once.

IMPROVED OUTLOOK IN COPPER MARKET

Commenting on conditions in the copper market, the News Bureau of Boston says: "The spot London market is very strong and the shorts are being squeezed, but when they have covered, prices on G. M. B. are likely to get toprices on G. M. B. are many to gether, so that the comparatively low releas now ruling for futures can hardprices now ruling for futures can hard-ly be called a weak feature. In New York a fair business is reported. Demand is not brisk or very large, but enough to hold prices steady. Exports for February will barely reach 11,000

A New York dispatch to the same publication says: "Consumers at pres-ent prices are not inclined to buy very far ahead, but there is a fair business doing for deliveries over the next six

weeks to hold prices steady. Small or-ders calling for quick delivery are bo-ing booked at full prices, while holders generally are inclined to shade top fig-ured when a good order is obtainable."

CHARACTERISTIC ORE IN CLUSTER GROUP

The ferro-sulphides of Bingham have nade their appearance in the properties of the Cluster Mining company, with everything to indicate its development at an early day into a characteristic Bingham producer, says Superintendent Falco, who was in from his diggings during the day. The ores are not yet of high grade, said he, but reveal values in gold and silver, as do those of the neighboring bonansas. The ledge, which, manifestly, parallels the main one for which the tunnel is headed, was broken into at a point 500 feet from the mouth, the main one, according to survey, 600 feet distant at this time. While the main tunnel is being shoved ahead as rapidly as possible, a drift is being run with the strike of the new ledge, with everything in most satisfactory condition. Mr. Falco has no doubt of the presence of a typical Bingham producer in his territory. everything to indicate its development at

A DULL MONTH IN LOCAL PI

The month on the mining exchang closed upon the transfer of 564,369 shares of stock, for which \$118,460.88 was shelled out, the business for the corresponding period in 1903 reaching a total of 965,197 shares, that brought \$696,637.57. The record was characterized by another pile of disappointments, the investor who loaded up in January on the theory that the bottom had been reached, marking up a gain only at protracted intervals, this in provoking contrast with the increased tomage from the diggings and the unprecedented earnings at the furnaces. The day's trading on 'change was confined to 38,576 shares, that brought \$637.37, with Tetro and Little Chief among the sprinters. Heavy buying orders and a renewal of rumors that the latter was about to cut a melon sent the former up to 35 cents, although the buyer at that figure was allowed sixty days in which to settle for it, while Little Chief advanced from 3 cents to 6 cents on assurances that ores of good commercial quality were appearing with the second-class on the 800-foot level. For \$1.25 in dimes and nickels—some of them outlawed by the car conductor—the buyer walked forth with 13,000 shares of Joe Bowers, which at one period had a market valuation of \$540, while 1000 Wabash responded to a \$10 bill that was shaken under its nose. Daly West, which did business at \$34.50 at the morning session, came out at \$34.25 around the close, although the busual dividend of \$111,000 will be paid on schedule time, while Uncle Sam was passed over the counter at 294, cents, with the day closing on the following market: closed upon the transfer of 564,369 share of stock, for which \$118,460.88 was shelle ing market:

ROBERT BELL ON SHERMAN'S PROCESS

Robert Bell, Inspector of Mines for Idao, in his annual review of the industry up here, has commended to the miners of the Coeur d'Alenes the use of the Sher-man methods employed at Park City as the most efficient in the concentration of

the most efficient in the concentration of their product.

"The bulk of the ore treated in the Coeur d'Alene runs about 10 per cent lead and from half an ounce to one ounce in silver per unit of lead, and the average loss is 39 per cent of the gross value of the feed in lead and a triffe more in silver. This seems like a large loss, but it is a high saving compared with the big Australian plants at the Broken Hill district, where only 65.57 per cent of the lead and less than 59 per cent of the silver contents of the ore is saved." says Mr. Bell.

"The principal loss in the Coeur d'Alene method is in the coarse jig tallings and in the fine silmes. At the silme end an important additional recovery can doubtless be made and is being diligently figured on by the operators.

"The Daly West mill at Park City. If ah.

EARNINGS AT PRESENT

Trinity ... 4 629 U.S. Mining .. 20 129 U.S. Oil ... 8 75

A statement recently furnished by George H. Dern, manager of the Con. Mercur, at the solicitation of Eastern shareholders in the company, reveals that on February 15th of the present year

shareholders in the company, reveals that on February 15th of the present year there was a cash balance in the treasury of \$27,000—with all bilis paid. The earnings of the mines on 500 tons daily amount to \$51,500, gross, monthly; the expenses for January, \$47,500, net earnings for that period, \$4500.

"It is evident that the resumption of dividends is dependent upon the increased saving of values to be effected by means of the Moore slimes process. We expect this process to increase our net saviagra about 50 cents per ton," continues the management. "The plant has been idle since New Year's pending the construction and installation of new separators. These are nearly completed and we expect to start up the slimes plant again early next week. When it was first determined to put in the Moore process we were told that it would cost about \$12,200, and could not be installed in less than ninety days. It has taken nine months to perfect it and the cost has been \$5,000. There has never been a shortage of ore in the mines, but the grade has averaged somewhat lower than formerly. This fact, in connection with the poor extractions, has hindered the company from making any money during the past searon, and the cost of the slimes plant again ger MacVichie on his return from camp yesterday, until provision has been made for its economic reduction. The control of the surplus." son, and the cost of the slimes had to come out of the surplus

MONARCH COMPANY

of incorporation were filed last week at Portland, Me., will not be announced for several weeks, says the Commercial of New York. The reason for reducing the company's capitalization from \$20,000,000 to \$15,000,000 is said to be that those behind the enterprise, after mature consideration, desired to be more conservative in their estimates of the proposed value of the properties to be taken in. This is the company which, it is expected, will make a proposition to the Majestic Stockholders to take up the properties now belonging to the Majestic Copper Mining and Smelting company and place them in the comof incorporation were filed last week at ing company and place them in the bine.

BLACKBIRD DIRECTORS TO GATHER TODAY

The newly-elected directors of the Blackbird Mining company have returned from their possessions in Copper gulch, out of Prisco, and will meet today for the out of Frisco, and will meet today for the purpose of deciding on future develop-ments. What that will be is easily con-jectured, as it has been most impressively demonstrated by the owner of the Cactus group, with which the American Smelting and Refining company has just contract-ed for its entire output, and the region is capable of enormous tonnages. Already much of the same class of ore has been opened up in Copper gulch, and the Black-bird's campaign will no doubt be an ener-getic one.

HIGH-GRADE ORE FROM YANKEE CON.

With which to sweeten up the February output of its Tintle properties, the management of the Yankee Con. has at the sampler a carload of ore from which it expects to derive over \$3000, the rock, to all appearances, identical with that which was marketed a short time ago and for a car of which \$3200 was received. President Du Bois and Treasurer Amsden will leave for the nine tomorrow to make thorough examination of it.

NICKEL MINES

Lake Crowd.

COAST OF NORWAY

In Custody.

Senator Smoot and Philo T. Farnsworth Join Martin Christopherson Across the Waters.

Martin Christopherson, a former member of the Board of County commissioners, has just returned, bringing with him an option on nickel and copper-bearing ledges in that far distant domain that, according to the report by Capt. Benjamin Tibbey, the expert mining man who has devoted much of the winter to an examination of the properties, should afford a source of big revenues, if not a fortune. It was during the expedition into the country last year that Mr. Christopherson tied up the territory which now promises to en-rich him, and rallying a syndicate con-sisting of Senator Smoot, Henry C. Lund, Henry Dinwoodey, P. T. Farns-worth, with Knudson Bros. of Brigham City and others, returned to clinch it. Under the option on which the initial payment had been made, he began to rip the ledges open, and was astonished to find from 2 to 6 per cent nickel, with a value of 66 cents a pound in one of the ledges; in the other an average of 9.5 per cent copper. Of each he reports a strong vein, the nickel-hearing one showing from nine nickel-bearing one showing from nine to twenty feet of ore, which has opened up for 130 feet on the strike, according to the report by Capt. Tibbey, while the copper ore has increased as depth has been attained there. For the reduction of nickel ores an

electric process is in use in Norway, al though the furnaces at Swansea are open to the reduction of a concentrated product, the cost of transportation by water but \$1.12½ per ton. The same outlet is afforded the copper-bearing ores, and with the arrival of Capt. Tibbey, who landed at New York on Friday last, arrangements will be made for systematic development as well as the reduction of both classes of ore. In the result of the properties at this time.

The output of copper ore from this source has been steadily increasing for some time, and a larger volume even could be provided were the furnaces at

WITHHOLDS NAMES

the smelter in need of it.

At the Eagle & Blue Bell the shaft will be completed to the tunnel level by May 1st, when the cost of extraction will have been materially reduced. Meanwhile not much work is being done on the ore bodies, although the conditions of the c throughout.
